

GARNET

General catalogue mechanical presses

HIDROGARNE

www.hidrogarne.com

High performance and excellence in hydraulic and mechanical presses.

HIDROGARNE has a business career that began in 1987 with the manufacture of machines solely for the Spanish market, successively we went extending through different European countries and we are currently exporting our hydraulic presses to more than 20 countries around the world.

It guarantees an experience of more than 33 years of innovation, quality and commitment to our customers.

The continuous progress during all these years places us as leaders in the manufacture of hydraulic presses.

In our new stage we have agreed to a technical-commercial and engineering collaboration with one of the most prestigious manufacturers in Europe in the manufacture of eccentric presses. They are specialized for 50 years in the manufacture of mechanical presses, automatic lines and high-performance transfer systems.

Convinced of the quality of our hydraulic presses, we have extended the manufacturing guarantee to a period of two years.

All our range of mechanical presses is designed and manufactured entirely at Europe.

We are specialized in the manufacture of mechanical presses with capacities, measurements and technical characteristics adapted to every customer needs.

PE SERIES

The PE series mechanical presses are suitable for a wide variety of applications to industries that perform punching, stamping, cutting and deep drawing works.

They are made of S355JR steel, stabilized, and mechanized at the end of the welding process to ensure a perfect parallelism and precision. Calculated and designed with finite element software. With all this, we always guarantee our high standards of precision and quality.

The rod is built of high-strength forged steel and high-performance alloy bushings.

To guarantee perfect maintenance and operation, all our range is equipped with centralized automatic lubrication with a programmable progressive system.

OVERLOAD AND COMPENSATION

An overload protection unit is installed to protect machine components and installed tools. A safety valve discharges the oil from the chamber when for any reason the reached set value is higher than the nominal load.

For an effective balance of the slide and the dies, the compensation is by means of two pneumatic cylinders.

PNEUMATIC CLUTCH & BRAKE COMBINATION

The clutch-brake is electropneumatic, equipped with a double safety body solenoid valve and crossflow.

The pneumatic system includes a compensation tank, a regulator-lubricator filter, a control pressure switch, and a safety valve.

ELECTRICAL INSTALLATION AND SAFETY

The control panel features a switch enabling the user to select the desired type of work in manual, semi-automatic or automatic position. Electrical and hydraulic manoeuvres are redundant and self-controlled. They incorporate an additional PLC for manoeuvre and safety.

Operation is carried out by low voltage two-hand push button and electric pedal.

Safety is guaranteed using lateral opening protections with level IV safety light curtains placed on the sides of the work area.

It meets and satisfies all the essential health and safety requirements in accordance with the CE standard.

The PE Series range of mechanical presses is divided into three models:

PE MODEL: Available with a power of 30 and 40 Tn.

The transmission between the drive shaft and the eccentric shaft is by means of a direct flywheel, there are no intermediate reductions between the drive shaft and the eccentric shaft, this system allows us higher speeds and productions. The slide is made of welded and stabilized steel with 4 ground prismatic guides.

PE-4 MODEL: Available with a power from 40 to 315 Tn.

The transmission between the motor shaft and the eccentric shaft is by means of a gearbox with ground gears, this system allows us to work with a high tonnage at relatively low nominal speeds.

The slide is made of welded and stabilized steel with 4 ground prismatic guides. It incorporates a base for the recovery of the excess oil from the lubrication.

Models from 160 to 315 Tn. have automatic ram adjustment.

PE-6 MODEL: Available with a power from 125 to 315 Tn.

The transmission between the motor shaft and the eccentric shaft is by means of a gearbox with ground gears, this system allows us to work with a high tonnage at relatively low nominal speeds.

The slide is made of welded and stabilized steel with 6 ground prismatic guides.

It incorporates a base for the recovery of the excess oil from the lubrication. Automatic ram adjustment.

COMPLETE PRODUCTION LINES

On request we have complete power lines, peripherals, and turnkey project solutions available

PE / PE-4 Series

C type 4 guided ram mechanical presses

STANDARD FEATURES

- Pneumatic Clutch & Brake Combination
- Dual Safety Valve
- Both Hands Control
- Foot Pedal Control
- Central Motorized Lubrication System
- Automatic Ram Adjustment (*)
- Cam Limit with Proximity Switch
- Programmable Control System (PLC)
- Conformity of CE Machinery Directives
- Photocell Safety Guard
- Hydraulic Overload Protector
- Adjustable Stroke Movement
- Standard Anti-Vibration Pads
- 2 Year Warranty (**)

OPTIONAL ACCESSORIES

- Automatic ram adjustment (from 60 to 125 Tn)
- Inverter (speed variation)
- Pneumatic or Hydraulic die ejector or cushion
- Lower auxiliar table
- Strain gauge system
- NC digital display with memories

(*) Only Between 160 Tons - 315 Tons
 (**) Normal Operating Conditions Excluding User Errors.

PM SERIES

The double stanchion presses PM series are suitable for a wide variety of applications to industries such as automotive, aerospace, rail and many more related to metal forming.

They are double reduction presses, with one or two connecting rods. They are made of S355JR steel, stabilized and machined at the end of the welding process to guarantee perfect parallelism and precision. Calculated and designed with finite element software. With all this, we always guarantee our high standards of precision and quality.

The rod is built of high-strength forged steel and high-performance alloy bushings.

To guarantee a perfect maintenance and operation, all our range is equipped with centralized automatic lubrication with a programmable progressive system.

Designed with a complex system of eccentric gears with opposite rotation that allows a double reduction in speed and long strokes. High energy is also obtained at very low nominal speeds, suitable for drawing operations.

The dimensions of the heights of the prismatic and sliding guides are to offer maximum rigidity facing the high demands, limiting the deformation of the work surfaces to minimum values.

OVERLOAD AND COMPENSATION

An overload protection unit is installed to protect machine components and installed tools. A safety valve discharges the oil from the chamber when for any reason the reached set value is higher than the nominal load.

For an effective balance of the slide and the dies, the compensation is by means of two pneumatic cylinders.

PNEUMATIC CLUTCH & BRAKE COMBINATION

The clutch-brake is electropneumatic, equipped with a double safety body solenoid valve and crossflow.

The pneumatic system includes a compensation tank, a regulator-lubricator filter, a control pressure switch, and a safety valve.

ELECTRICAL INSTALLATION AND SAFETY

The control panel features a switch enabling the user to select the desired type of work in manual, semi-automatic or automatic position. Electrical and hydraulic manoeuvres are redundant and self-controlled. They incorporate an additional PLC for manoeuvre and safety.

Operation is carried out by low voltage two-hand push button and electric pedal.

Safety is guaranteed using lateral opening protections with level IV safety light curtains placed on the sides of the work area.

It meets and satisfies all the essential health and safety requirements in accordance with the CE standard.

The PM Series range of mechanical presses is divided into four models:

PMF MODEL: Available with a power from 100 to 400 Tn. The slide is with 6 prismatic guides. They are double reduction with one connecting rod and fixed stroke.

PMV MODEL: Available with a power from 100 to 400 Tn. The slide is with 6 prismatic guides. They are double reduction with one connecting rod and variable stroke.

PMF2 MODEL: Available with a power from 300 to 630 Tn. The slide is with 6 prismatic guides. They are double reduction with double connecting rod and fixed stroke.

PMF 2L MODEL: Available with a power from 300 to 630 Tn. The slide is with 6 prismatic guides. They are double reduction with double connecting rod and fixed stroke and large dimension tables.
